

MANUAL DE INSTALACIÓN Y CONFIGURACIÓN DE PHP DEBUG.

1. Arrancar servidor web Apache desde XAMPP.

2. Entrar desde el navegador en localhost y darle a PHPInfo en el menú superior.

Welcome to XAMPP for Windows 8.2.12

You have successfully installed XAMPP on this system! Now you can start using Apache, MariaDB, PHP and other components. You can find more info in the FAQs section or check the HOW-TO Guides for getting started with PHP applications.

XAMPP is meant only for development purposes. It has certain configuration settings that make it easy to develop locally but that are insecure if you want to have your installation accessible to others.

Start the XAMPP Control Panel to check the server status.

Community

XAMPP has been around for more than 10 years – there is a huge community behind it. You can get involved by joining our Forums, liking us on Facebook, or following our exploits on Twitter.

3. Hacer Ctrl + A y luego Ctrl + C para copiar todo el contenido del apartado de PHPInfo.

PHP Version 8.2.12	
	
System	Windows NT DESKTOP-3G4FO4N 10.0 build 19045 (Windows 10) AMD64
Build Date	Oct 24 2023 21:10:40
Build System	Microsoft Windows Server 2019 Datacenter [10.0.17763]
Compiler	Visual C++ 2019
Architecture	x64
Configure Command	cscript /nologo /e:jscript configure.js "--enable-snapshot-build" "--enable-debug-pack" "--with-pdo-oci=.\\..\\..\\instantclient\\sdk,shared" "--with-oci8-19=.\\..\\..\\instantclient\\sdk,shared" "--enable-object-out-dir=.\\obj\\" "--enable-com-dotnet=shared" "--without-analyzer" "--with-pgo"
Server API	Apache 2.0 Handler
Virtual Directory Support	enabled
Configuration File (php.ini) Path	no value
Loaded Configuration File	C:\xampp\php\php.ini
Scan this dir for additional .ini files	(none)
Additional .ini files parsed	(none)
PHP API	20220829
PHP Extension	20220829
Zend Extension	420220829
Zend Extension Build	API420220829,TS,VS16
PHP Extension Build	API20220829,TS,VS16
Debug Build	no
Thread Safety	enabled
Thread API	Windows Threads
Zend Signal Handling	disabled
Zend Memory Manager	enabled
Zend Multibyte Support	provided by mbstring
Zend Max Execution Timers	disabled
IPv6 Support	enabled
DTrace Support	disabled
Registered PHP Streams	php, file, glob, data, http, ftp, compress.zlib, compress.bzip2, https, ftps, zip, phar
Registered Stream Socket Transports	tcp, udp, ssl, tls, tlsv1.0, tlsv1.1, tlsv1.2, tlsv1.3
Registered Stream Filters	convert.iconv.*, string.rot13, string.toupper, string.tolower, convert.*, consumed, dechunk, zlib.*, bzip2.*

Configuration

4. Acceder a la web de XDebug (<https://xdebug.org/wizard>) y pegar todo lo copiado anteriormente en el cuadro blanco.

Installation Wizard

This page helps you finding which file to download, and how to configure PHP to get Xdebug running. Please paste the **full** output of `phpinfo()` (either a copy & paste of the HTML version, the HTML source or `php -i` output) and submit the form to receive tailored download and installation instructions.

```

5. Le damos a la opción de “Analyse my phpinfo() output”.

Analyse my phpinfo() output

6. Nos muestra los requisitos de las cosas que tenemos que instalar.

Summary

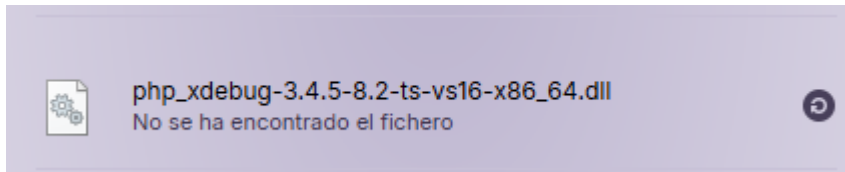

- **Xdebug installed:** 3.4.5
- **Server API:** Apache 2.0 Handler
- **Windows:** yes
- **Compiler:** MS VS16
- **Architecture:** x64
- **Zend Server:** no
- **PHP Version:** 8.2.12
- **Zend API nr:** 420220829
- **PHP API nr:** 20220829
- **Debug Build:** no
- **Thread Safe Build:** yes
- **OPcache Loaded:** no
- **Configuration File Path:** no value
- **Configuration File:** C:\xampp\php\php.ini
- **Extensions directory:** C:\xampp\php\ext

You're already running the latest Xdebug version

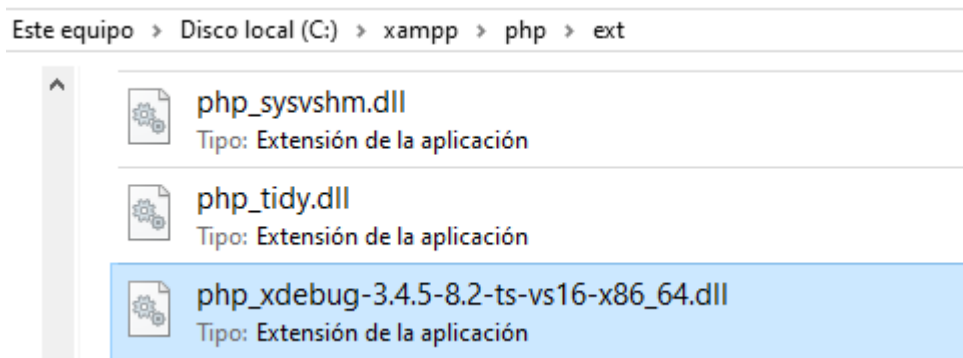

But here are the instructions anyway:

1. Download `php_xdebug-3.4.5-8.2-ts-vs16-x86_64.dll`
2. Move the downloaded file to C:\xampp\php\ext, and rename it to `php_xdebug.dll`
3. Update `C:\xampp\php\php.ini` to have the line:
`zend_extension = xdebug`
4. Restart the Apache Webserver

7. Hacemos clic sobre el archivo que nos sale para descargar y se nos descargará un fichero.

8. Guardar el fichero en la carpeta que pone en el paso 2.

9. En el paso 3 nos metemos en el fichero php.ini de la carpeta /xampp/php y en vez de poner lo que pone en el paso 3 añadimos al final del fichero las siguientes líneas:

```
[XDebug]

xdebug.remote_enable = 1

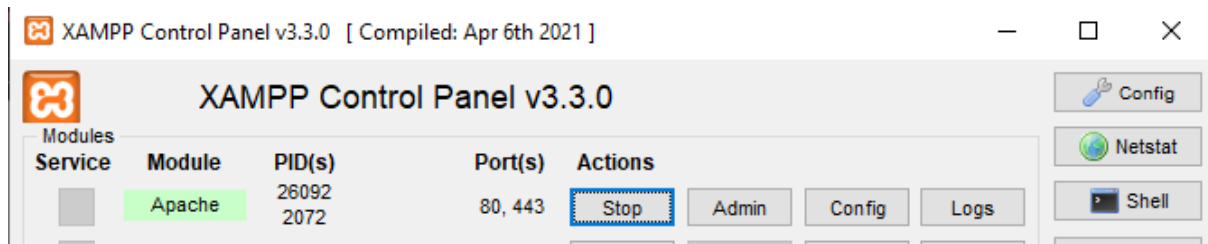

xdebug.remote_autostart = 1

zend_extension = C:\xampp\php\ext\NOMBRE_FICHERO_DESCARGADO.dll
```

Así me quedaría el fichero (ese nombre es el de mi fichero).

```
2022 [XDebug]
2023
2024 xdebug.remote_enable = 1
2025
2026 xdebug.remote_autostart = 1
2027
2028 zend_extension = C:\xampp\php\ext\php_xdebug-3.4.5-8.2-ts-vs16-x86_64.dll
```

10. Apagamos y encendemos de nuevo el servidor apache desde xampp.

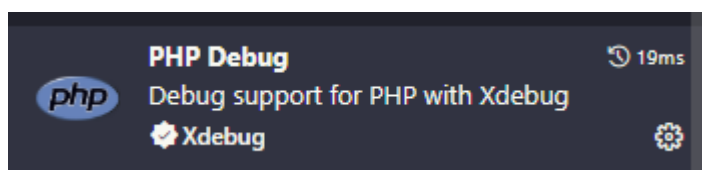

11. Entramos de nuevo al PHPInfo desde el localhost y comprobamos que justo al lado de la imagen aparece “with xdebug”

System	Windows NT DESKTOP-3G4FO4N 10.0 build 19045 (Windows 10) AMD64

12. Ahora vamos a Visual studio Code y descargamos la extensión.

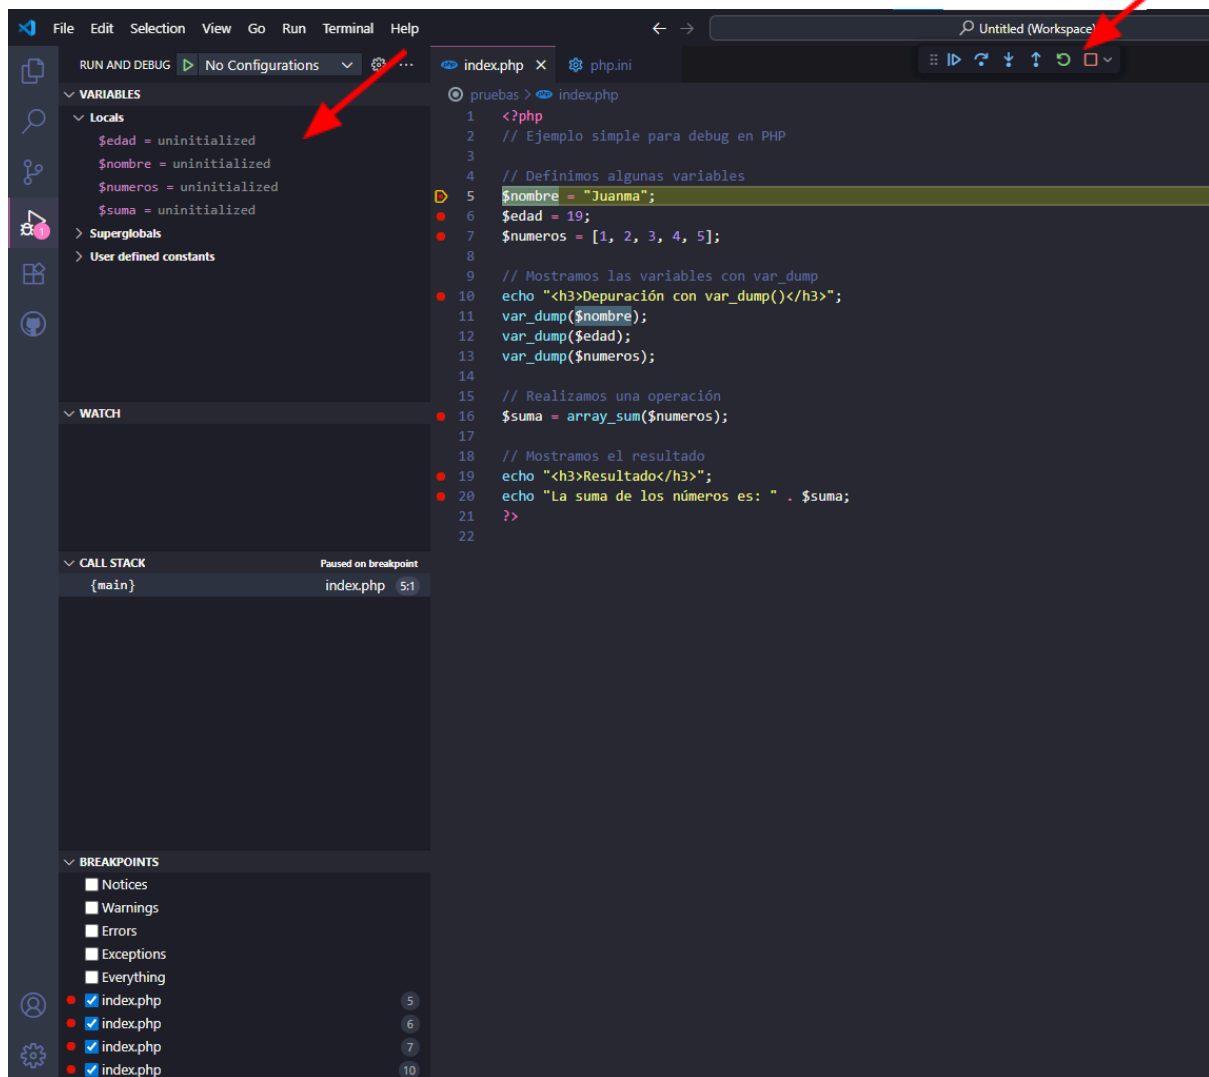

13. Le damos a este icono que nos sale de run y debug.

14. Añadimos los puntos de depuración en el fichero que queremos.

15. Le damos al play de run y debug y nos salta por que linea vamos y los controles.

16. Ahora si le damos a siguiente se nos va a la siguiente línea y nos saldrán los valores de las variables.
